

Is water the best thing in the world?

For the Spring term, Blue Class will be exploring the topic of water!

We will start by looking at where in the world we can find water, exploring the different types of water like rivers, seas and oceans. We will look at how to map on a world scale as well as completing field work to map our local school area.

We will then look at water from a scientific viewpoint, examining the different states of matter and exploring water through experiments. We will look at water in respect to climate, biomes and the water cycle.

For our final weeks of the term, Blue Class will look at why we need water to be healthy and who in the world has enough water. We will look at the different uses of water around the world, create persuasive posters to encourage people to use water wisely and think about what the charity Water Aid tries to achieve through its work.
