

Boat Race

Draw and label your boat here.

Why have you designed your boat in this way?

Do you think your boat will move through the water easily and quickly? Why / why not?

How long did it take your boat to cross the water tray?

How did your boat do compared to the other boats?

Why do you think your boat performed this way? Refer to water resistance and streamlined shapes.

How would you adapt your boat to make it more streamlined if you were to race it again?
